NOTES CONCERNING THE USE OF THIS NITROGEN GAS SPRING

Approx. operating temperature (°C): _____ Cycles/minute: _____

Actual operating stroke (mm): _____

Required initial force (daN): _____

NOTE: We charge these nitrogen gas springs in order to have the required initial force (daN) at the operating temperature (°C), considering the internal pressure increase caused by the higher temperature. The initial force measured at room temperature (20°C) will be lower than the nominal one written on the gas spring label.

USE INSTRUCTIONS

The **CHT** and **CSMHT** series gas springs are not self-lubricated.
Lubricate the piston rod with grease with molybdenum disulfide (MoS₂).

Always fasten the nitrogen gas springs at the base to a flat and clean support surface with high resistance screws. For other fixing options, please see our 'Accessories for nitrogen gas springs for dies' catalogue.

Other: please see the complete use instructions on our 'Nitrogen gas springs for dies' catalogue.
